Q1: Choose the correct answer:

1) 3 + 3 + 3 + 3 = 3 × ....

a. 1 b. 2 c. 3 d. 4

2) 5 × 5 = ...

a. 10 b. 0 c. 25 d. 20

Q2: Answer the following:

3) 7 + 7 + 7 + 7 + 7 = ... × ....

4) 3 × 6 = ...

5) 4 × 4 = ...

Property (1): added or subtracted 1 from multiplier:

2	×	5	=	10
Multiplicand		Multiplier		Product

• Add 1 to the multiplier:

➢ When the multiplier increased by 1, the answer increases by the multiplicand

EX:

- $5 \times 3 = 5 + 5 + 5 = 15$
- $5 \times 4 = 5 + 5 + 5 + 5 = 20$

So,

5×4 is increased than 5×3 by 5

Then,

$5 \times 4 = 5 \times 3 + 5$

• Subtract 1 from the multiplier:

➢ When the multiplier decreased by 1, the answer decreases by the multiplicand

EX:

- $4 \times 3 = 4 + 4 + 4 = 12$
- $4 \times 2 = 4 + 4 = 8$

So,

4×3 is decreased than 4×2 by 4

Then,

$4 \times 2 = 4 \times 3 - 4$

Property (2): Commutative property:

➢ When the order of the multiplicand and the multiplier is switched, the answer remains the same

EX:

- $3 \times 4 = 3 + 3 + 3 + 3 = 12$
- $4 \times 3 = 4 + 4 + 4 = 12$

So,

$3 \times 4 = 4 \times 3$

- Use the relation between multiplicand and multiplier to solve problems.
- Use commutative property to solve problems.
- Memorize facts of 6
